Subject index

Volume 107 (2000)

Aggregation behavior; Anticancer phospholipid analogs; Octadecyl-methyl-glycero-phosphocholine (OMGPC); Octadecyl-imidazoyl-deoxy-glycero-phosphocholine (OIDGPC); Light scattering; Small angle neutron scattering; Small angle X-ray scattering **107**, 179

Alkyl chain; *sn*-2-Deoxy-2-amido-glycero-phospholipids; Enantiomer **107**, 121

Alkylphosphocholines; Phospholipids; HPLC analysis **107**, 131

Anticancer phospholipid analogs; Octadecyl-methyl-glycero-phosphocholine (OMGPC); Octadecyl-imidazoyl-deoxy-glycero-phosphocholine (OIDGPC); Aggregation behavior; Light scattering; Small angle neutron scattering; Small angle X-ray scattering **107**, 179

Anti-oxidants; Linoleate esters; Thermal-oxidation; Photo-oxidation; Free radical; Singlet oxygen; High performance liquid chromatography **107**, 107

Controlled release/uptake; Emulsifier; Food additive; Lipid composition; Metastability; Monoolein; Phase diagram; Polarized light microscopy; Undercooling; X-Ray diffraction **107**, 191

Crystal habit; Linoleic acid; α-Linolenic acid; Polymorphism; Crystallization; Solubility **107**, 169

Crystallization; Linoleic acid; α-Linolenic acid; Polymorphism; Solubility; Crystal habit **107**, 169

Decanting; Membrane fusion; Hemagglutinin fusion peptide; Dynamic light scattering **107**, 99

Drug-phospholipid conjugates; Prodrugs; Phospholipid; Phospholipase A_2 **107**, 143

Dynamic light scattering; Membrane fusion; Hemagglutinin fusion peptide; Decanting **107**, 99

Electrostatic interaction; HIV envelope glycoprotein; Lipid monolayer; Film balance; Lipid–peptide interaction **107**, 83

Emulsifier; Controlled release/uptake; Food additive; Lipid composition; Metastability; Monoolein; Phase diagram; Polarized light microscopy; Undercooling; X-Ray diffraction **107**, 191

Enantiomer; *sn*-2-Deoxy-2-amido-glycero-phospholipids; Alkyl chain **107**, 121

Film balance; HIV envelope glycoprotein; Lipid monolayer; Lipid–peptide interaction; Electrostatic interaction **107**, 83

Food additive; Controlled release/uptake; Emulsifier; Lipid composition; Metastability; Monoolein; Phase diagram; Polarized light microscopy; Undercooling; X-Ray diffraction **107**, 191

Free radical; Linoleate esters; Thermal-oxidation; Photo-oxidation; Anti-oxidants; Singlet oxygen; High performance liquid chromatography **107**, 107

Hemagglutinin fusion peptide; Membrane fusion; Dynamic light scattering; Decanting **107**, 99

High performance liquid chromatography; Linoleate esters; Thermal-oxidation; Photo-oxidation; Anti-oxidants; Free radical; Singlet oxygen **107**, 107

HIV envelope glycoprotein; Lipid monolayer; Film balance; Lipid–peptide interaction; Electrostatic interaction **107**, 83

HPLC analysis; Alkylphosphocholines; Phospholipids **107**, 131

Interdigitated structure; Phase determination; Phospholipid; Membrane **107**, 93

Light scattering; Anticancer phospholipid analogs; Octadecyl-methyl-glycero-phosphocholine (OMGPC); Octadecyl-imida-

PII: S0009-3084(00)00211-5

zoyl-deoxy-glycero-phosphocholine (OIDGPC); Aggregation behavior; Small angle neutron scattering; Small angle X-ray scattering **107**, 179

Linoleate esters; Thermal-oxidation; Photo-oxidation; Anti-oxidants; Free radical; Singlet oxygen; High performance liquid chromatography **107**, 107

Linoleic acid; α-Linolenic acid; Polymorphism; Crystallization; Solubility; Crystal habit **107**, 169

α-Linolenic acid; Linoleic acid; Polymorphism; Crystallization; Solubility; Crystal habit **107**, 169

Lipid composition; Controlled release/uptake; Emulsifier; Food additive; Metastability; Monoolein; Phase diagram; Polarized light microscopy; Undercooling; X-Ray diffraction **107**, 191

Lipid monolayer; HIV envelope glycoprotein; Film balance; Lipid–peptide interaction; Electrostatic interaction **107**, 83

Lipid–peptide interaction; HIV envelope glycoprotein; Lipid monolayer; Film balance; Electrostatic interaction **107**, 83

Membrane fusion; Hemagglutinin fusion peptide; Dynamic light scattering; Decanting **107**, 99

Membrane; Phase determination; Interdigitated structure; Phospholipid **107**, 93

Membranes; NMR; Solid state NMR; Phospholipids; Relaxation **107**, 159

Metastability; Controlled release/uptake; Emulsifier; Food additive; Lipid composition; Monoolein; Phase diagram; Polarized light microscopy; Undercooling; X-Ray diffraction **107**, 191

Monoolein; Controlled release/uptake; Emulsifier; Food additive; Lipid composition; Metastability; Phase diagram; Polarized light microscopy; Undercooling; X-Ray diffraction **107**, 191

NMR; Solid state NMR; Phospholipids; Membranes; Relaxation **107**, 159

Octadecyl-imidazoyl-deoxy-glycero-phosphocholine (OIDGPC); Anticancer phospholipid analogs; Octadecyl-methyl-glycero-phosphocholine (OMGPC); Aggregation behavior; Light scattering; Small angle neutron scattering; Small angle X-ray scattering **107**, 179

Octadecyl-methyl-glycero-phosphocholine (OMGPC); Anticancer phospholipid analogs; Octadecyl-imidazoyl-deoxy-glycero-phosphocholine (OIDGPC); Aggregation behavior; Light scattering; Small angle neutron scattering; Small angle X-ray scattering **107**, 179

Phase determination; Interdigitated structure; Phospholipid; Membrane **107**, 93

Phase diagram; Controlled release/uptake; Emulsifier; Food additive; Lipid composition; Metastability; Monoolein; Polarized light microscopy; Undercooling; X-Ray diffraction **107**, 191

Phospholipase A_2; Drug-phospholipid conjugates; Prodrugs; Phospholipid **107**, 143

Phospholipid; Drug-phospholipid conjugates; Prodrugs; Phospholipase A_2 **107**, 143

Phospholipid; Phase determination; Interdigitated structure; Membrane **107**, 93

Phospholipids; Alkylphosphocholines; HPLC analysis **107**, 131

Phospholipids; NMR; Solid state NMR; Membranes; Relaxation **107**, 159

Photo-oxidation; Linoleate esters; Thermal-oxidation; Anti-oxidants; Free radical; Singlet oxygen; High performance liquid chromatography **107**, 107

Polarized light microscopy; Controlled release/uptake; Emulsifier; Food additive; Lipid composition; Metastability; Monoolein; Phase diagram; Undercooling; X-Ray diffraction **107**, 191

Polymorphism; Linoleic acid; α-Linolenic acid; Crystallization; Solubility; Crystal habit **107**, 169

Prodrugs; Drug-phospholipid conjugates; Phospholipid; Phospholipase A_2 **107**, 143

Relaxation; NMR; Solid state NMR; Phospholipids; Membranes **107**, 159

Singlet oxygen; Linoleate esters; Thermal-oxidation; Photo-oxidation; Anti-oxidants; Free radical; High performance liquid chromatography **107**, 107

Small angle neutron scattering; Anticancer phospholipid analogs; Octadecyl-methyl-glycero-phosphocholine (OMGPC); Octadecyl-imidazoyl-deoxy-glycero-phosphocholine (OIDGPC); Aggregation behavior; Light scattering; Small angle X-ray scattering **107**, 179

Small angle X-ray scattering; Anticancer phospholipid analogs; Octadecyl-methyl-glycero-phosphocholine (OMGPC); Octadecyl-imidazoyl-deoxy-glycero-phosphocholine (OIDGPC); Aggregation behavior; Light scattering; Small angle neutron scattering **107**, 179

***sn*-2-Deoxy-2-amido-glycero-phospholipids**; Enantiomer; Alkyl chain **107**, 121

Solid state NMR; NMR; Phospholipids; Membranes; Relaxation **107**, 159

Solubility; Linoleic acid; α-Linolenic acid; Polymorphism; Crystallization; Crystal habit **107**, 169

Thermal-oxidation; Linoleate esters; Photo-oxidation; Anti-oxidants; Free radical; Singlet oxygen; High performance liquid chromatography **107**, 107

Undercooling; Controlled release/uptake; Emulsifier; Food additive; Lipid composition; Metastability; Monoolein; Phase diagram; Polarized light microscopy; X-Ray diffraction **107**, 191

X-Ray diffraction; Controlled release/uptake; Emulsifier; Food additive; Lipid composition; Metastability; Monoolein; Phase diagram; Polarized light microscopy; Undercooling **107**, 191
